X-Scooter Flooding Instructions!

Flooding Instructions

The scooter is designed not to flood, however life is unpredictable and these instructions will help you minimize the damage done should a flood occur. If you flood your X-Scooter, be sure to find and fix the problem before diving again.

Time is of the essence in any flooding. The faster you can get everything rinsed and dry, the less damage will be done. These instructions are for real flooding only, not for condensation or drops from wet dive gear.

Salt Water in Body Compartment

- Dunk entire tail in fresh water and agitate well for 5 min
- Drain and leave in a warm dry place until 100% dry
- Wipe body and battery dry, clean fuse holder and electrical connectors
- Damage will be minimal. Motor bearings may become noisy and require changing

Fresh Water in Body Compartment

- Drain and leave in a warm dry place until 100% dry.
- Wipe body and battery dry, clean fuse holder and electrical connectors.
- Damage will be negligible.

Salt Water in Battery Compartment

- Dunk entire battery in fresh water and agitate well for 5 minutes.
- Drain and leave in a warm dry place until 100% dry.
- Damage will be severe. Most likely the pack will be unusable. At best it will still function, but with a dramatically reduced cycle life.

Fresh Water in Battery Compartment

- Drain and leave in a warm dry place until 100% dry.
- Damage will be severe. Most likely the pack will be unusable. At best it will still function, but with a dramatically reduced cycle life.
